| * - * - * - * - * - * - * - * - * - * - * - * - * - * - * - * | | | | |
| - | COTONEASTER PRAECOX | | | - |
| * | This is one of the hardiest Cotoneasters and went through 20 degrees | | | * |
| - | below zero without any harm. It has large berries like cranberries | | | - |
| * | which color up in the middle of August and remain on until very late | | | * |
| - | Fall. It grows rather flat and makes an ideal plant to mix in with | | | - |
| * | foundation plantings and especially with ranch type houses. It also | | | * |
| - | makes an ideal low spreading hedge. | | | - |

|---|--|------|--------|
| * - * - * - * - * - * - * - * - * - * - * - * - * - * - * - * | | | |
| - | RHUS COTINUS ROYAL PURPLE | | - |
| * | (New dark purple-red leaf Smokebush) | | * |
| - | There are several varieties of Purple Smokebush although Royal Purple is | | - |
| * | considered the very best. A number of varieties of Smokebush have been | | * |
| - | tried out in the nursery with Royal Purple always turning out to be the | | - |
| * | most outstanding. I am convinced of this to the extent that it is the | | * |
| - | only one now being propagated in the nursery. Royal Purple keeps its | | - |
| * | rich dark purple reddish colored foliage from Spring to late Fall. In | | * |
| - | late summer the matured leaves show a mottled edge which is a light red | | - |
| * | edge around the dark purple leaf. It is an outstanding plant in that it | | * |
| - | draws the attention of all who visit the nursery and is greatly admired | | - |
| * | for its brilliant foliage. The foliage is darker than any red Japanese | | * |
| - | maple. The plant is adaptable for use as a lawn specimen especially in | | - |
| * | locations where the Japanese Maple is not hardy. Royal Purple is the | | * |
| - | only Purple Smokebush to receive a Certificate of Merit from the Royal | | - |
| * | Horticultural Society. The branches make an excellent filler for bouquets. | | * |

Novelties

New

VIBURNUM CARLESI COMPACTA

This plant was discovered several years ago in the nursery in a block of *Viburnum carlesii*. It is slower growing and has distinct dark green shiny leaves. It grows into a very compact plant and for this reason is called Compacta, ideal for use in foundation plantings. It buds up very heavily when a matured plant. The size, color and fragrance of the flowers are exactly like those of *Viburnum carlesii*. This plant is a distinct novelty of which a limited quantity is offered.

HYDRANGEA PETIOLARIS

(Climbing Hydrangea) ➡

An attractive vine which does equally well in shade or sun. Its foliage is bold, clean and shrub-like and a rich dark green color. Short spur branches are topped with white, fragrant, Hydrangea-like blooms during the summer and lasts for a considerable period. Climbing Hydrangea is one of the finest and choicest vines grown. It clings by rootlets to walls and trees without support and can be planted against rocks for a cover.

VIBURNUM WRIGHTII

Upright and grows slower than *Viburnum dilatatum*. The leaf is deeply veined and the bright red berries color up in August and remain bright red throughout the fall even after the foliage takes on a fall color. The plant is excellent for berry effect. Being slow growing makes it suitable for use in ranch-type house plantings.
